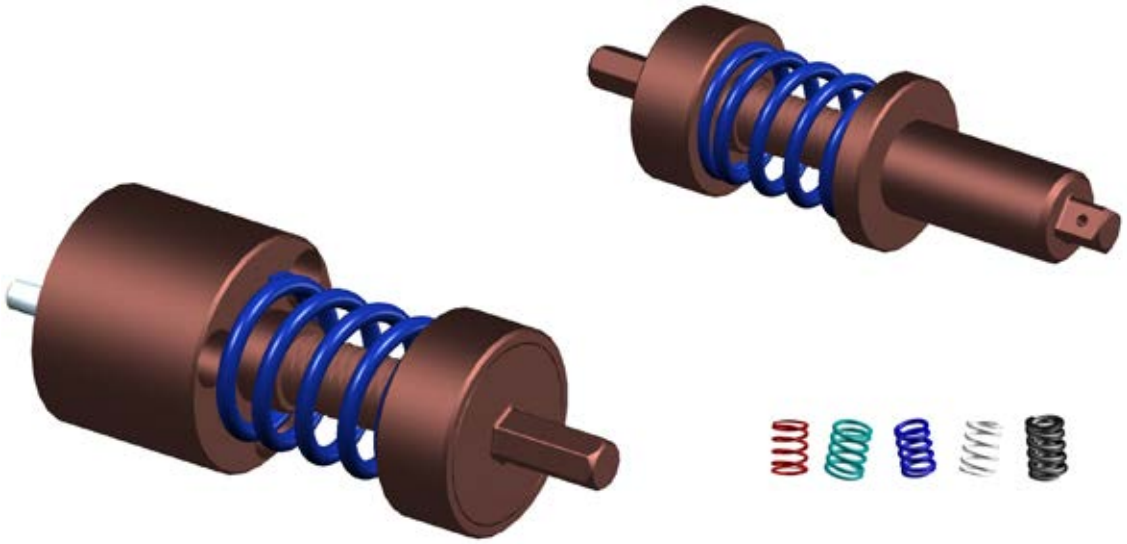
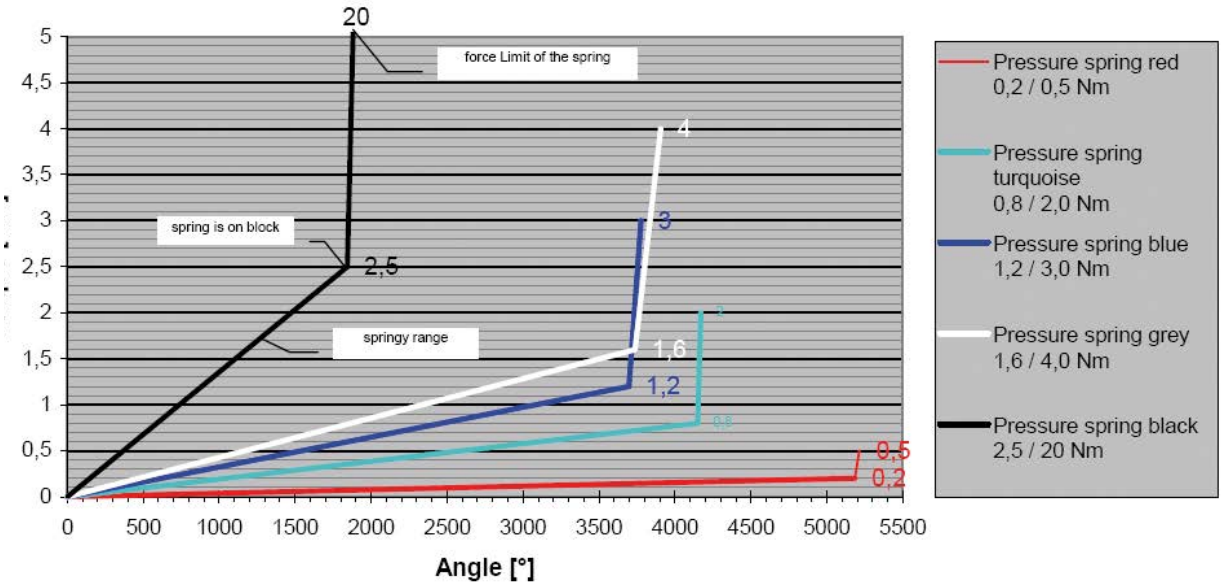
Screwing simulator
Type VS-DRT1



Adjusting and checking of the switch-off-torque of electric and pneumatic screw drivers

Screwing simulator to be used in cooperation with the torque transducer DRT1.
It can be assembled to the DRT1 fix with a flange or plugged in with a ¼" square drive adapter. This is the right way to test your screw drivers. For the different classes of screw drivers we supply 5 different pressure springs. The dynamics of these springs you can see at the graph below.



Example for Order:

Screwing simulator with flange	**VS-DRT1**
Screwing simulator with square drive	**VS-DRT1-T**
Screwing simulator spare spring e.g. 4Nm	**VS-DRT1-D4,0**
