

MODEL 53 & 53A TRIAXIAL CRASH TEST ACCELEROMETER

SPECIFICATIONS

- Triaxial MEMS Crash Test Accelerometer
- Best in Class Piezoresistive MEMS Sensor
- $\pm 50g$ to $\pm 2000g$ Ranges
- Compliant to SAE-J211/J2570
- Compliant to ISO-6487
- Ideal for Crush Zone Installations
- Low Profile, Adhesive Mount

FEATURES

- Minimal Warm-Up Drift
- 0-4500Hz Frequency Response, All Axes
- 10,000g Shock Protection
- 2-10Vdc Excitation
- Optimum Gas Damping
- Linearity <1%
- IP65 Environmentally Sealed
- Multiple Cable Options

APPLICATIONS

- Auto Safety Testing Applications
- Biomechanical Studies
- Transient Drop Testing
- Helmet Impact Testing
- Crush Zone Testing
- Shock and Impact Testing

The Model 53 and 53A Triaxial Crash Test Accelerometers are some of the most popular sensor to be used in crush zone and side impact testing when a triaxial solution is preferred. The accelerometers feature the next generation of the reliable TE Connectivity piezoresistive MEMS chip with superior stability and measurement accuracy.

The model 53 and 53A accelerometers are both available in ranges from $\pm 50g$ to $\pm 2000g$ and features a full-bridge configuration with a nominal 4000 Ω impedance that offers quick warm-up time and minimal drift, unlike lower impedance designs on the market.

Both of the 53 series accelerometers are fully compliant to the performance requirements of SAE-J211 & SAE-J2570. The accelerometers are packaged in an anodized Aluminum housing and fully encapsulated in Stycast potting for reliable protection in harsh crash test applications.

The model 53 accelerometer has three sets of twisted leads for the electrical interface while the model 53A has an integral 12 wire cable assembly with braided shield and Polyurethane jacket. For a flange mount version of the model 53A, TE Connectivity also offers the model 53AF with identical performance.

TE Connectivity also supplies the calibration data in a user friendly excel format which enables high volume users to quickly upload the calibration information for each sensor installed.

PERFORMANCE SPECIFICATIONS

All values are typical at +24°C, 80Hz and 10Vdc excitation unless otherwise stated. TE Connectivity reserves the right to update and change these specifications without notice.
